

A worker in a high-visibility vest and hard hat is using a hand tool to lift a manhole cover. The worker is wearing a white hard hat, a bright yellow-green high-visibility vest over a dark long-sleeved shirt, blue jeans, and brown work boots. The tool is a long-handled metal device with a circular head that fits under the manhole cover. The cover is being lifted from a hole in the asphalt. The background shows a residential street with trees and houses under a clear sky.

THANK YOU FOR YOUR PURCHASE

THE

EZLYFT

INSTRUCTIONS

Thank you for choosing the EZLyft Magnetic Lifting Tool! You're about to experience the simplest, safest way to handle cast iron lids. The EZLyft is designed for maximum efficiency with just a few simple steps:

- 1. Preparation:** Ensure the magnetic end of the EZLyft is clean and dry.
 - 2. Attach:** Firmly place the magnetic end directly onto the surface of the cast iron lid you wish to lift.
 - 3. Lift:** Once the magnet is securely attached, use the ergonomic handle to smoothly and steadily lift the lid straight up. The powerful magnet does the work!
 - 4. Remove:** To detach the EZLyft, simply tilt the handle away from the lid.
-  **Pro Tip:** The EZLyft works best when placed on a relatively flat, clean spot on the lid, maximizing the magnetic contact.
