vCam WiFi Adapter

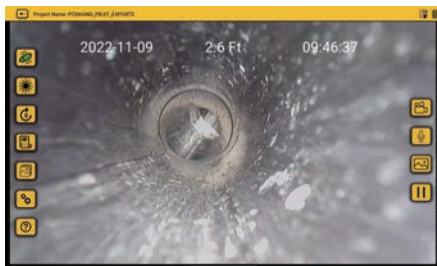

Control Device for Camera Reels

- Local or cloud based file sharing
- Text JPEGs for real-time decisions
- Live sharing of the active tablet screen
- Li-ion battery up to 6 hours of runtime
- Flexible bring-your-own device viewing

The vCam Wi-Fi Adapter turns any Vivax-Metrotech reel with an HD camera head into a wireless system powered by the vCam Mobile Controller (VMC) App. Eliminate the control module to reduce cost, weight, and setup time—while gaining instant file sharing.

Control all reel functions through the app, including camera lights, distance counter reset, sonde, and text writer. Recordings are saved to a searchable gallery and can be shared online or saved to a USB thumb drive.

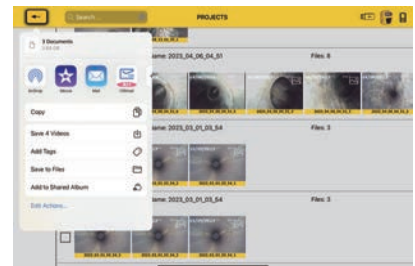

Use any iOS or Android device as a wireless monitor and position it for maximum comfort. The app records in three resolution options and mounts quickly to any Vivax-Metrotech reel using the included quick-release bracket.

Control all reel functions with the VMC app

Files are organized in a searchable gallery

Instantly share files or entire projects
